1.2. Research lines
covered by the Call

Becoming explores the transformation of the existing reality, addressing the relationship between the urgency of contemporary challenges and a long-term perspective that unfolds through six thematic research lines: *Becoming More-than-human*, *Becoming Attuned*, *Becoming Embodied*, *Becoming Interdependent*, *Becoming Hyper-conscious*, *Becoming Circular*.

The call invites relevant research and knowledge, that critically explores the diverse ways in which architecture connects to the six thematic research lines. Submissions must, therefore, address at least one of them:

Becoming More-than-human

How can architecture embrace ecological coexistence?

Becoming Attuned

What forms of meaning and poetics can we engage with our everyday practice?

Becoming Embodied

How can technologies and values be embedded in the transitions from matter to construction?

Becoming Interdependent

How can we design politics of space that activate interpersonal relationships?

Becoming Hyper-conscious

What actions can emerge from a deeper awareness of global and local interplays?

Becoming Circular

Within post-extractivist proximity policies, which cycles can be spatially produced?

This Conceptual Framework has been further developed in a separate document that can be downloaded from the website www.uia2026bcn.org and from this link: https://uia2026bcn.org/wp-content/uploads/2025/03/uia2026bcn_abstract.pdf

1.3. Organisers
of the Call

This call for participants is organized by CSCAE (Higher Council of Professional Associations of Architects of Spain) and COAC (The Architects' Association of Catalonia).

1.4. Contributions:
Three submission
formats

Diverse experiences and knowledge are essential to articulate the particular agency of architecture in relation to "*Becoming. Architectures for a planet in transition*". To expand the possibility of transdisciplinary knowledge exchange and include voices that are not commonly part of academic and professional discourse, we invited submissions in three different formats: Critical design, Critical essay and Critical image.

5.1. Critical design

Submissions in this format include design projects, industrial design concepts, design prototypes or explorations of design methodologies. These could range from conceptual designs to practical solutions, as well as innovative approaches within the design field, built or unbuilt.

5.2. Critical essay

Submissions in this format include original written works such as essays, academic articles, or research papers. Proposals should focus on critical analyses, theoretical discussions, written interviews, or research findings related to the field of design and spatial practice, maintaining a connection to the themes of the congress.

5.3. Critical image

Submissions in this category include visual works such as films, photography, multimedia pieces, or visual conversations. This format also includes creative and experimental work.

This Jury Report covers exclusively the Critical Design format. The Critical Essay and Critical Image category, will be presented in a distinct Jury Report.

1.5. Registration and submissions

The UIA World Congress of Architects 2026 – Call for Participants remained open from 31 March to 02 June 2025, receiving a total of 1,547 submissions:

- 552 Critical Design
- 198 Critical Image
- 797 Critical Essay

Participants represented 88 countries.

All entries were submitted electronically through the official UIA 2026 platform using the standard online form. Only materials meeting the established guidelines were accepted for evaluation.

1.6. Evaluation criteria

Each submission was evaluated based on 3 categories:

1. Adscription and relevance for the topic of *Becoming* (according to the Conceptual Framework Abstract of the Congress).
2. Adscription and relevance for each specific research line (*Becoming More-than-human*, *Becoming Attuned*, *Becoming Embodied*, *Becoming Interdependent*, *Becoming Hyper-conscious*, *Becoming Circular*).
3. Quality, originality and innovation of the work, considering its research field and impact in its wider cultural context.

1.7. Evaluation process

To evaluate the submissions, the UIA World Congress of Architects 2026 – Call for Participants established a two-stage international process, ensuring coherence, transparency, and alignment with the Congress's evaluation criteria.

1st Stage - Evaluation Committee

In the first stage, the Evaluation Committee reviewed all eligible submissions to verify compliance with the established criteria and formal requirements. Based on a comparative analysis, a selection of the most consistent and relevant proposals was shortlisted for assessment by the Jury of Experts. The committee included international profes-

sionals and academics linked to the Congress research lines.

2nd Stage · Jury of Experts

In the second stage, the Jury of Experts, a panel of distinguished international professionals and academics, conducted a holistic comparative assessment of the pre-selected proposals. The Jury had access to all submitted entries and retained the right to bring back any project from the initial stage for further evaluation.

Given the geographical diversity of the members, the Jury convened via interactive online sessions. Through a series of structured discussions, the Jury progressively refined the selection, ensuring that the chosen works demonstrated conceptual strength, thematic relevance, and innovative design strategies.

1.8. Congress participation formats

Speakers

Selected works may be presented in formats that foster dialogue, individual lectures, two-speaker conversations, or multi-participant panels, and will be accompanied by images, slides, or video. Sessions will generally be in person, with online participation possible depending on the final programme formats. As the programme develops, the precise structure (format, duration, and number of speakers per session) will be refined to ensure dynamic engagement.

Exhibition

Selected works may be included in the Congress Exhibition, the opening of which will take place prior to the dates of the Congress. Works presented in this format must meet the specific conditions set by the exhibition team, including space and installation requirements. The showcase of the entries may be either physical or digital, and additional materials may be requested by the curatorial team to ensure their correct display and presentation. The curatorial team will be responsible for orchestrating the exhibition, meticulously featuring all the research content generated previously.

Official Catalogue

Selected works may be included in the official catalogue, which will be launched during the Congress. This catalogue aims to provide an overarching perspective on the congress theme and will feature curatorial statements, as well as a selection of projects and essays contributed by keynote guests, critics and researchers.

Digital Proceedings

All selected designs and images from this open call will be included in the Digital Proceedings of the Congress with ISBN, Legal Deposit, and DOI. These proceedings will be published as Open Access by UPC Commons with a Creative Commons CC-BY-NC-ND 4.0 license, link <https://creativecommons.org/licenses/by-nc-nd/4.0/>.

Note

The curators of the UIA World Congress of Architects 2026 Barcelona “Becoming. Architectures for a planet in transition,” together with the Scientific Committee and the Jury of Experts, will have the authority to determine the presentation format for the selected works during the UIA World Congress of Architects 2026 “Barcelona. Becoming. Architectures for a planet in transition”.

2. Critical Design. Jury Report.

2.1. Evaluation Committee

The Secretariat confirmed that 552 proposals, complete and compliant with the formal requirements, were received and made available to all members of the Evaluation Committee in advance of deliberations.

The first evaluation phase took place from 23 June to 10 July 2025. During this period, each evaluator reviewed and shortlisted up to 60 proposals. The evaluation team was composed of:

- Nuno Melo Sousa — Architect, Principal at Nuno Melo Sousa
- Anadis González & Fernando Martirena — Architects, Principals at Infraestudio (with only one vote)
- Jorge Sobejano — Architect, Principal at Burr Studio
- Carmen Torres and Mariona Benedito on behalf of the UIA2026BCN Curatorial Team (with only one vote)

Following this process, a coordination meeting was held on 16 July 2025, resulting in a preselection of the following 121 proposals.

The preselection aimed to reflect the richness and diversity of the submissions received. The shortlisted works reveal a wide range of perspectives. Together, they provided the foundation for the deliberations of the Jury of Experts in the second evaluation phase.

2.2 Jury of Experts

The second evaluation phase was conducted by the Jury of Experts between 17 July and 12 September 2025. Each Jury member reviewed and shortlisted up to 30 proposals from the preselected pool.

The Jury of Experts was composed of:

- Carlos Facio — Architect, Co-founder of Colectivo C733
- Catherine Mosbach — Landscape Architect, Founder of Mosbach Paysagistes
- Kersten Geers — Architect, Co-founder of OFFICE Kersten Geers David Van Severen
- Xu Tiantian — Architect, Founder and Director of DnA_Design and Architecture
- Carmen Torres and Mariona Benedito on behalf of the UIA2026BCN Curatorial Team (with only one vote)

A first Jury meeting was held on 5 September 2025 to discuss the shortlisted entries, followed by a final meeting on 12 September 2025, during which the Jury confirmed the selection of 31 finalists.

The Jury Secretariat, represented by Rita Rahme Makrai (Barter Partnership), responsible for the Technical Secretariat appointed by the Congress, acted as Secretary of the Jury.

All documentation and shortlisted proposals were made available to the Jury members in advance, ensuring an informed review process. After in-depth discussion and the exchange of perspectives and evaluation criteria, the Jury reached a shared consensus and agreed upon a final selection of 31 proposals that best represent the diversity, creativity, and critical spirit of Becoming. Architectures for a planet in transition.

2.3. Final Results

After completing both evaluation phases, the Jury of Experts reached a shared agreement on the final selection of proposals. The selected projects reflect a wide range of geographies and approaches. These works stand out for their conceptual clarity, methodological rigor, and their ability to articulate innovative responses to the ecological, social, and cultural transformations defining our time.

The following list presents the 31 selected projects, which will be featured in the programme of the UIA World Congress of Architects 2026 Barcelona (see 1.8. Congress participation formats)

683ddeb8a2c22	Mass Madera: Advancing Industrialized Timber Construction in Spain

The selected proposals collectively reflect a renewed commitment to social responsibility, environmental intelligence, and spatial experimentation across diverse geographies and scales.

The Jury highlighted the following qualities as central to their deliberations:

- Contextual Intelligence. Sensitivity to local conditions, materials, and communities, embodying principles of adaptive reuse and ecological regeneration.
- Social Engagement and Inclusion. Projects addressing collective well-being were recognised for their social agency and architectural empathy.
- Material and Constructive Innovation. Works were commended for advancing circular methodologies, industrial innovation, and low-carbon construction systems.
- Ecological Reciprocity. Urban Strategies acknowledging Communities and Landscape Thinking – The Jury valued proposals that restore and reimagine relationships between human-driven proposals and ecological systems.
- Pedagogical and Cultural Inquiry. Projects exemplifying architecture's potential as a medium of cultural continuity, learning, and social exchange.
- Speculative and Critical Vision. The Jury also acknowledged entries that experiment with representation, temporality, and civic imagination, expanding the disciplinary scope of design.
- Alignment with the theme of Becoming. The selected works resonate with the Congress's conceptual framework, engaging critically with the notion of transformation and transition within one or more of the six research lines of Becoming. Architectures for a Planet in transition.
